UFO Timber Fork Sorting

The Ufo Timber fork for sorting is specially designed attachment for timber handling at grading plants, loading tables and log piles.

The long legs of the grapple, in combination with the geometry of the catch arm, provide a high fill factor during transport between the different objects.
Can be equipped with a hydraulic ejector as an accessory. For this an additional hydraulic function or electric changeover valve is required.

UFO Timber Fork Sorting is suitable for wheel loaders between 13 and 52 tonnes.

Characteristics

- Replaceable bolt-on edges on the fork legs are standard.
- Rounded catch arm tip to minimise timber damage.
- End-position damped hydraulic cylinders.
- Direct mounting is available as an option.
- Can be optionally equipped with a hydraulic ejector.
